Birdstrike alliance

Four world leading bird strike prevention companies join forces

Avisure, Bird Control Group, Robin Radar and Veisar Technologies founded the Birdstrike Alliance as a bird-strike prevention consortium combining innovative bird detection and deterrence systems with world class service and training.

Your benefits

Through collaboration, optimising resources and maximising productivity, our one-stop-shop offers turn-key solutions to mitigate birdstrikes.

In the past, every airport needed to source bird control equipment from different suppliers and make their own decision on what works and what doesn't. Birdstrike Alliance provides airports with an initial objective assessment followed by commissioning, implementation and full product training on bird detection and bird deterrence.

We offer packages that include one or any combination of the following products and services:

- Bird detection radar
- Training of bird control teams
- Deployment of bird control teams
- Bird deterrent equipment like: laser and acoustic devices
- Product support and training
- Database solutions
- Wildlife hazard assessments
- Systems Integration
- Bird studies

Avisure

Avisure is an industry leader in birdstrike risk management. Their extensive experience, knowledge and understanding of wildlife behavior and aircraft operations has taken the Avisure team to more than sixty national, international and military airports since 1997. Their expertise helps clients to reduce bird hazards with comprehensive risk management strategies, staff training and ongoing management programs.

Robin Radar Systems

Robin Radar Systems has developed a new generation of avian radars which is capable to detect and monitor small flying targets like bats and birds. Thanks to the specifically developed sensors as well as the clever dynamic clutter filtering software, the system is able to determine trends and patterns of behavior of birds. This is a valuable input for implementing new policies in wildlife and habitat management programs.

The information collected by the radar system can also be applied real time which enables the wildlife manager to be more responsive to bird hazards and take mitigation measures more effectively. Robin Radar offers the ultimate intelligence tool to the airports wildlife manager.

Veisar Technologies

Veisar Technologies has cemented its place at the forefront of Critical Infrastructure Protection supporting customers throughout the Middle East and Asia Pacific region. From our offices in Dubai, Singapore and Hong Kong and a variety of channel partners, we deliver innovative, integrated solutions; from design and installation through to commissioning, personnel training and ongoing customer support, meeting not just your needs today – but long into the future.

Birdstrike Mitigation, Video Surveillance, Process Monitoring, Airport Security and Passenger Screening are key segments of our business. Through the global partnership with manufacturer Battelle, Veisar is a distributor of the cutting-edge LS10 bottled liquid scanner. They are also able to supply the latest in airport security products such as Explosive Trace Detection, Baggage X-ray systems, Behavioural Recognition Software, Facial Recognition Software, Short & Long Range surveillance cameras and CCTV systems.

Bird Control Group

Bird Control Group is a rapidly growing Dutch manufacturer of innovative bird repellent systems. Bird Control Group serves customers in fifty countries around the globe including major airports like Amsterdam Schiphol and London Airport. The products are recognised by the WWF for its innovative, effective and animal friendly solution.
