

Invest in your defense.

In today's cyber security landscape, email and traditional anti-virus tools are no longer sufficient for organizations looking to defend against advanced persistent threats and targeted attacks. Datashield helps organizations create and maintain a sophisticated security strategy through our tools, processes, and team of experts.

OUR SOLUTIONS

Managed Detection & Response

A truly resilient security strategy relies on people and management just as much as its tools and processes.

Datashield employs some of the brightest minds in cybersecurity to staff its US-based SOC 2 Type-II certified facility. The security team's expertise differentiates Datashield from its competitors.

Endpoint Detection & Response

Traditional anti-virus solutions are no longer sufficient for organizations looking to defend against sophisticated attacks.

Datashield deploys, tunes, and monitors endpoint protection platforms to provide greater network visibility and advanced features in a single lightweight solution.

Email Management

In today's cybersecurity landscape, email security tools are just the first line of defense against sophisticated cyber-attacks.

Datashield helps clients set up and manage email security solutions, tailored to an organization's complex needs and compliance requirements.

Vulnerability Management

Discovering security infrastructure weaknesses is a critical process that is often overlooked due to budget constraints and knowledge gap.

Datashield is able to provide affordable vulnerability management as a service, identifying, prioritizing and responding to threats.

Hire the best

Datashield has been a leader in managed detection and response for over a decade, now backed by ADT.

As a Gartner-recognized security firm, customers have come to value Datashield's commitment to first class service and industry-leading results.

People

We take pride in our talented team across all departments. Our executive leadership have been long-time innovators in the cybersecurity space and our analysts are some of the brightest minds in the industry.

Processes

Our commitment to clients is creating powerful solutions and efficient processes. We rely on our proprietary technology, disruptive approach, and over a decade of experience to deliver world-class results to our clients.

Technology

Between our orchestration tool SHIELDVision, advanced SOC, and ability to integrate with a variety of industry-leading tools, we have the hardware and the software to provide advanced protection.

About

Founded in 2009 Datashield, an ADT company, is one of the most tenured cyber security firms in North America. Our company provides end-to-end cyber security resilience solutions.

We take the time to get to know our clients' business needs and deliver sophisticated, tailored security solutions.

Datashield has the experience and resources to efficiently and effectively set up, configure and manage virtually any SIEM appliance, email security tool, or endpoint platform--all from our US-based SOC 2 Type II-certified facility.

Our partnership with ADT's Commercial Security Services allows us to integrate and provide network security and other perimeter services. Additionally, our vendor relationships allow us to provide a wide spread of tools and features at competitive pricing.
