

# HemaSpot-HF™

Advanced blood sampling at your fingertips!

Stick finger with lancet.

Add 2 drops of blood.

Wait 1 minute.

Close lid and ship.

## Hemaspot-HF Blood Collection Device

### Shaping the Future of Biosampling!

HemaSpot-HF is an easy to use patented device that simplifies blood sample collection and provides robust storage/shipping of blood samples at ambient temperatures.

## Hemaspot-HF Features and Benefits

HemaSpot-HF solution improves collection techniques and results by providing unique features:

- **Robust**  
Protects the sample from contamination
- **Safe**  
Reduces biohazard exposure
- **Fingerstick Simplicity**  
No Special training required
- **Easy**  
Ambient temperature storage and shipping
- **Fast**  
Takes only 5 minutes from sampling to shipping
- **Stable**  
Sample stays stable at ambient temperatures

## Tracking and Storage

Each HemaSpot-HF device may be labeled with a unique barcode for sample identification that can be read by standard readers such as smart phones or laboratory scanners.

**For Research Use Only. Not For Use in Diagnostic Procedures**

# HemaSpot-HF™

Advanced blood sampling at your fingertips!

## Dried Blood Spot (DBS) Technology

HemaSpot-HF is based on dried blood spot (DBS) technology - best known for newborn screening - in which a baby's heel is pricked and spotted on filter paper. Currently more than 50 tests are routinely performed from a quarter-sized spot of blood.

## Innovative Sampling

A portion of sample is easily removed from the fan form by plucking a blade, enabling multiple tests from a single collection.

## Applications

- Clinical Trials
- Medical Research
- Military field medicine
- Disaster & public health crises
- Disease surveillance
- Epidemiology & population studies
- Biobanking
- Biomarker studies
- Space medicine

**And many more uses!**
