

# GREEN CARTRIDGE

Waterless Urinal Replacement Cartridge

## A LOW COST, ECO-FRIENDLY SOLUTION

### Traditional Chemical Based Technology

Strong and often overwhelming urine odor problems

Cleaning supplies require particular and costly sealants and chemicals

Cartridge replacement is complex, unsanitary, with exposure to potential harmful sewer gasses

Chemical cartridges need to be replaced frequently due to their short life span

Large plastic cartridges are not eco-friendly but are still disposed into landfills

High probability of 'dry drain' from bacteria and water scale build up creating lumps of uric acid large enough to clog pipes

### Green Cartridge Technology

Patented dual silicon skirts that eliminate odor and prevent backflow

Cleaned easily and affordably with water and green acid based solutions

Cartridge core simply twists in and out and does not contain liquid or hazardous chemicals

Useful life of cartridge far exceeds that of traditional technology

Consumable part of cartridge requires low frequency replacement and has small footprint

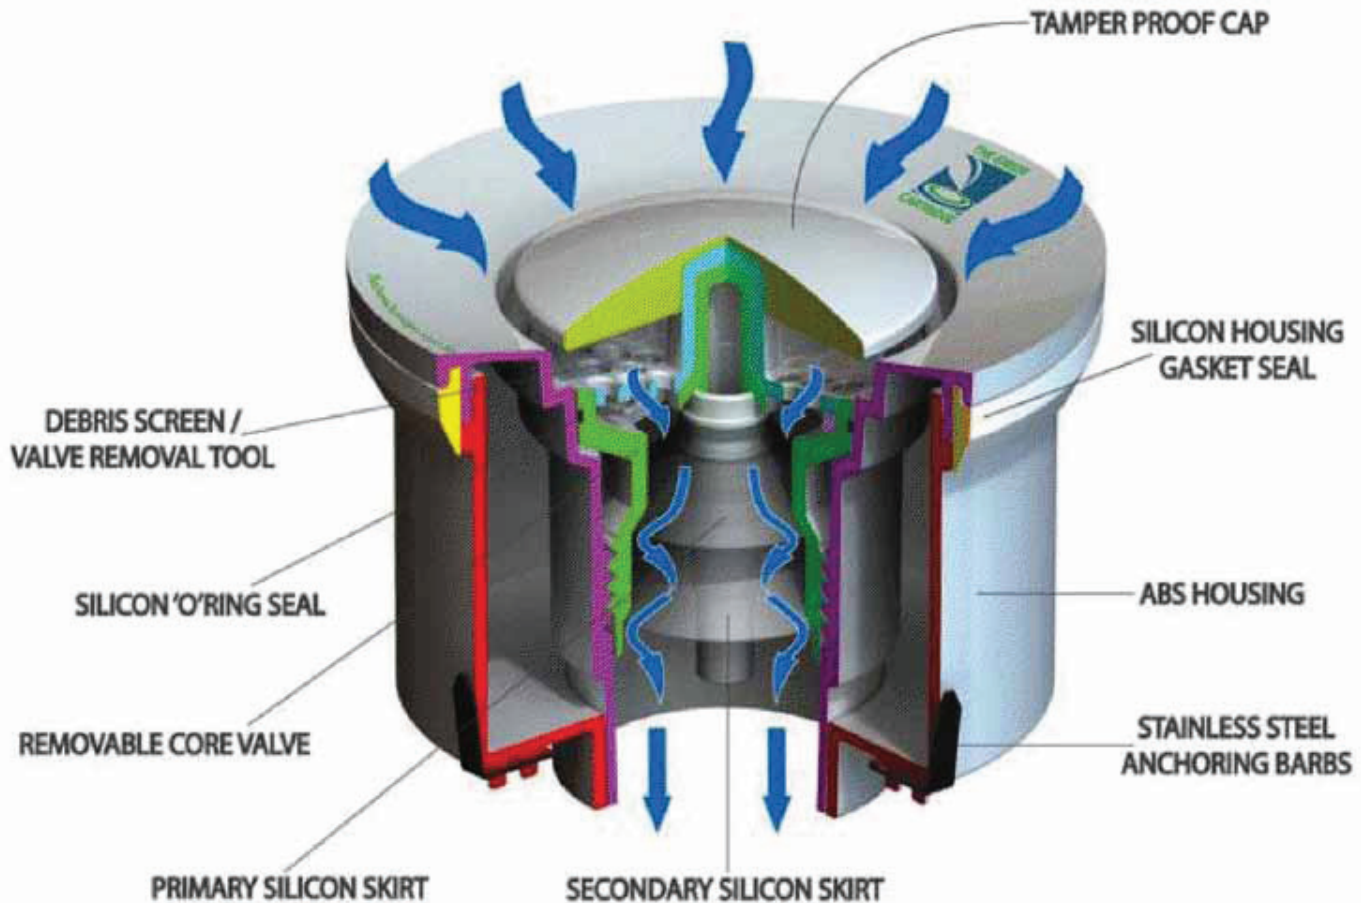

Proper maintenance with water and cleaner minimizes uric acid and struvite build up in the plumbing
