## Available for Windows & Linux

# Server Based Converter

Rainbow PDF Server Based Converter (SBC) is based on the proven technology of Antenna House Formatter. Coming from a legacy of excellence, SBC has not only met our clients' expectations but exceeded them. SBC stands out due to performance on heavy loads, compatibility with Windows & Linux, and a friendly customer support team.

The latest release of SBC **V6.0** introduces support for **Microsoft Office 2016** and **bidirectional text (BIDI)**. BIDI support is a major feature for documents that need to display right-to-left scripts such as Arabic or Hebrew. The **MS Word conversion engine** in **V6.0** has also been completely rewritten to ensure high-fidelity while maintaining the integrity of the original document when converting to PDF. Previously, V5.2 enhanced the support for internalization & localization in terms of displaying dates in locale format and text layout rules for different languages.

## Performance

SBC is in production with several large corporations converting an average of over 10 pages/second.<sup>†</sup> Whether your company is large or growing, SBC can meet all your conversion needs. SBC is thread safe, allowing concurrent access and lets you take control with multiple API options. Plus, all conversions are performed without the need for Microsoft Office or Adobe software installation.
