Phynder
Provider Verification Services

PHYND

Time is valuable!

Working with bad or missing provider information can cost you both time and money. Having the right provider information at your fingertips — when you need it — is essential to improve both your patient care and your business performance.

Phynd Technologies' **Phynder Verification Service** solve this problem with tools, services and reports that enable your organization to have current and quality information on all of your providers.

The Phynder Verification Service enables hospitals, health systems and large provider groups to have verified specific information on their providers when they need it -- primary billing address, phone and fax.

Phynd staff members call all of your providers and update this critical information. The Phynder solution then leverages the industry-leading Phynd **Unified Provider Management** (UPM) that allows you to unify, manage and share a single, verified, custom profile on each of your providers, regardless of where that data exists in your multiple legacy IT systems.

This single, accurate, source for provider information streamlines workflow, improves productivity, speeds up billing, optimizes the revenue cycle and enhances care coordination enterprise-wide.

With the Phynder solution, hospitals have real time access into their single provider profiles (SPPs) and immediately know the status (verified or un-verified). Hospitals identify and control what fields are updated. Phynd universal provider profiles (UPPs) come pre-populated with NPA, State and DEA information. The Phynder solution is offered in several options: annual re-verification, on-going subscription as new providers refer into your hospitals or one-time ramp up of profile quality. All Phynd UPPs can be viewed online and downloaded as a simple file or directly integrated into your provider directory. There are additional benefits for Phynd Platform customers.

- **National Database -** Identified geography or use referring base from internal database extract

- **Single ID** - The NPI number is used as the universal identifier/key

- **Verification Status** - Clients decide which fields in their profile are to be verified. These fields directly impact the Phynd score ranking for that provider

- **Communication by a Professional** - Phynd data specialists are trained on the Phynd platform

- **Real-Time View of Profile Status** - Phynd web dashboard to view all profiles' status (verified or unverified)

- **Advanced Search Tools** - To lookup providers based on name, NPI, specialty, and other criteria

- **Download File** - A simple file of updated profiles can be downloaded by the customer
