

# BrightHive Secures Customer Data with Securityprogram.io

## Overview

BrightHive is changing the way organizations share data with one another by creating data trusts that allow organizations to securely and responsibly link their data to enhance their impact, empower individual and collective decision making, and increase equity of opportunity. Knowing that they will be assisting organizations in the collection and sharing of sensitive data and working with regulated government agencies, BrightHive made sure to prioritize security. BrightHive needed a security partner to help secure data, navigate security questions and meet regulatory security requirements.

*“Securityprogram.io has helped us to prepare for complex security review processes. We have a security team at our disposal for less than the cost of a full time security professional.” - **Tom Plagge, CTO***

## Solution

BrightHive enrolled in securityprogram.io at the Assisted tier. Starting with NIST 800-53 aligned policies, training and month by month tasks required to meet their policies, they embarked on a cross functional journey that is making their whole organization, infrastructure, application and culture more secure.

BrightHive uses the Assisted tier of securityprogram.io to accelerate their adoption of the program, to answer questions, to provide assistance with questionnaires, to get secure architecture reviews, secure code review and more.

## About securityprogram.io

Securityprogram.io is a SaaS cybersecurity tool that helps startups to medium sized businesses plan, execute, measure and automate their security program at a rate affordable for their size. A dedicated employee or hired project manager can run the security program in securityprogram.io without having security expertise.

At the Assisted tier organizations get 4 hours/month with a dedicated security expert along with full access to the securityprogram.io SAAS tool.
