# Introduction

On average, companies use 7 to 10 applications for various business purposes.\*

Businesses today need a global and open software infrastructure, there is proven demand for large scale, integrated systems. It is important for all business applications to have an efficient information flow to bring the organization the most benefits.

In order to beat competitors, companies either have to invest into a powerful one–stop–shop solution or have all of their existing systems integrated into one.

\*Connecting Software - <https://www.connecting-software.com/blog/infographics-why-are-it-system-integration-costs-so-high/>

# What is software integration?

“ The combining of subroutines, software modules or full programs with other software components in order to develop an application or enhance the functionality of an existing one.

- PC Encyclopedia

**At Kinetic**, it means, that your Kx systems could be linked to other systems your university uses. Software integration will help you and your team achieve more. Keep on reading to find out the benefits of system integrations and which applications your Kx software could be linked to.

# Benefits of software integration

## Improved company processes

- Reduction the amount of manual work which will lead to increased productivity and employee satisfaction.
- More free time to focus on exploring new opportunities.
- Introduction of automated processes will allow you to focus on the quality of your team rather than its size.

## Increased data visibility and insight

- Improved information flow by removing barriers between the systems.
- One version of your database instead of several will provide a better overview of all the details.
- More efficient analysis and reporting.

## Increased profits

- Increased efficiency will result in higher sales and decreased costs based on improved decision-making and operational processes.

# Integrations available with your Kx systems

Finance Systems

Card Systems

Academic Scheduling Systems
