The Leader In Deception Technology

The Most Effective Solution To Stop Advanced Attacks

illusive®

146

The average number of days an attacker spends inside your network before being detected

Once inside your network, advanced attackers persistently and patiently seek out information needed to move laterally towards their objective: your critical assets.

69%

Of organizations learned of a breach from outside agencies

Data breaches are revealed to the victims most commonly by the U.S. Secret Service and the Federal Bureau of Investigation (FBI).

85%

Of budgets are spent on prevention technologies

Prevention is not enough as data breaches are on the rise. Attackers are relentless and their methods evolve faster than legacy technology.

illusive networks® is pioneering deception-based cybersecurity with its award winning Deceptions Everywhere® technology.

By creating a deceptive layer across the entire network - agentlessly deployed on every endpoint, server, and network - illusive networks disrupts and detects breaches with source-based, real-time forensics without interrupting business.

illusive networks changes the asymmetry of cyber warfare

- Provide a complete solution with Deceptions Everywhere approach
- Advanced attackers can't tell what is real and what is deceptive data
- Detect lateral movements after the attacker has penetrated your defenses
- Capture real-time, high fidelity forensic data at the attack source
- Proactively show areas of compromise before, during, and after an attack

Agentless Deployment

Early Attack Detection

Zero False Positives

Detect And Deceive Advanced Attackers

illusive®

Deceptions Everywhere®

Weave a deceptive layer of information to every endpoint and server.

illusive covers your entire network with deceptions, creating an endless maze of false data. An attacker can't distinguish between real and fake information and progressing towards your critical assets becomes virtually impossible without being detected.

Deception Management System™

Automatically creates an optimized, best-fit, deceptive environment.

The illusive Deception Management System™ (DMS) uses advanced machine-learning to foresee and preempt cyber attack vectors. Deceptions are automatically created, instantly diversified and optimally deployed based on your corporate environment conventions. The intuitive DMS interface makes deploying, motioning and scaling a solution quick and easy, while the agentless technology ensures zero impact to business operations and working environments.

Attacker View™

See what the attacker sees. Map your entire network and identify potential risks.

Expose attackers by turning their strengths into weaknesses. Attacker View™ puts you inside the mind of an attacker, allowing you to view your entire network from their perspective enabling you to analyze, assess and mitigate potential attack risks.

Real-Time Forensics

Actionable breach alerts provide real-time forensics at the source.

illusive provides concrete evidence of a breach, containing all supportive forensics at the initiation of an attack, in real-time. Because valid users don't wander into the layer of deceptions, anyone that does is immediately identified and reported as a threat. The comprehensive forensics unveils attack location, path, techniques and context, that enable an efficient incident response process.
