Mobile Banking Competitive Index Overview
Research to Keep You Ahead of the Curve

Bi-Annual Release Dates: May 31 & November 30
In the Key Lime Interactive (KLI) Mobile Banking Competitive Index Report, KLI reviews eight (8) of the largest banks in the U.S.: Bank of America, Chase, Citibank, Navy Federal, PenFed, USAA, U.S. Bank, and Wells Fargo. The review examines their mobile sites as well as iPhone and Android Phone apps and ultimately ranks the banks, awarding top rank to those who most effectively meet the consumers self-defined need.

This report goes far beyond a basic heuristic evaluation or expert review, KLI’s methodology is unique because it incorporates consumer preferences and usability insights. An important part of our analysis is a 500-person survey of smartphone owners in which they are asked to weigh in and identify the features and capabilities that they consider critical for a successful experience with the mobile site or app offered by their bank. Our usability section highlights examples of good UX, opportunities for improvement, and note-worthy design strategies.

KLI’s intent in creating this third-party syndicated report is to:

1. Provide consumer-driven data to help guide banks as they prioritize features to implement. This guidance will be based on the results of a current consumer survey.
2. Summarize how the financial institutions differentiate themselves from their competitors through the capabilities and features that they offer.

Method

To create an overall score, we combine a capabilities assessment with user feature importance ratings. The capabilities assessment is created by examining the feature coverage of the bank sites and applications. User ratings are determined by a consumer survey and card sort.

Our review of the primary mobile properties includes a full verification of the financial institutions’ capabilities. The unmodified score represents feature coverage, or the company’s offerings by category. This is a binary evaluation reflecting the possession of certain criteria. Additionally, our team of UX experts review the mobile properties to provide usability insights.

How we incorporated user feedback

KLI conducted a consumer survey and card sort (n=500) to gather feedback about how customers prioritized features when using their bank’s mobile property. Individual feature scores were then weighed by their value to customers. The goal is to provide a metric of relative importance, so that the highest-scoring company is also the one providing customers’ desired features.
