

Software Product Manager, Full-Time, Bristol

Graphcore has created a completely new processor, the Intelligence Processing Unit (IPU), specifically designed for artificial intelligence. The IPU's unique architecture means developers can run current machine learning models orders of magnitude faster. More importantly, it lets AI researchers undertake entirely new types of work, not possible using current technologies, to drive the next great breakthroughs in general machine intelligence.

We believe our IPU technology will become the worldwide standard for artificial intelligence compute. The performance of Graphcore's IPU is going to be transformative across all industries and sectors whether you are a medical researcher, roboticist or building autonomous cars.

Our team is at the forefront of the artificial intelligence revolution, enabling innovators from all industries and sectors to expand human potential with technology. What we do, really makes a difference.

We are looking for a Software Product Manager to define and manage the delivery of software products to our customers. Working closely with the internal software engineering team, this individual will have experience of complex software development projects and their delivery. Experience with Machine learning, High-Performance Computing, or software tools for parallel processors is a big plus.

Responsibilities:

- Work with software engineering, commercial product management and customers to define and track software requirements for each market segment
- Be responsible for the detailed software product roadmap
- Work with Software Engineering to define and communicate software release packages and content
- Attend internal software planning meetings to ensure that the customer requirements are being met and prioritized correctly
- Define and oversee mechanisms required for delivery of software products to customers
- Work with Customer Engineering to ensure that any custom software solutions are taken-on and prioritized appropriately
- Oversee EULA and licensing issues concerning software products

Qualifications:

- BS or higher in CS, EE, or related technical field
- 10+ years of experience in complex software development projects and their delivery
- Ability to understand complex technical issues and work with others to address them
- Excellent communications and presentation skills to technical internal and external audiences
- Experience with Machine learning, High-Performance Computing, or software tools for parallel processors is a significant advantage.

We welcome people of different backgrounds and experiences and are committed to building an inclusive work environment that makes Graphcore a great home for everyone. We are an equal opportunity employer and want to build a work environment where everyone is happy, productive and respectful so they can do their best work. If you have a disability or additional need that requires accommodation, just let us know.
