

DevOps Monitoring Workshop

Both developers and platform operators must ensure effective monitoring mechanisms are implemented throughout their entire DevOps lifecycle. Fortunately CloudOps offers hands-on workshops that help software delivery teams modernize their pipelines. Our DevOps Monitoring workshop provides an overview of how various tools and processes can help identify performance issues in the application platform and infrastructure before becoming problematic. Sign up to save time and learn the business value and technical know-how of these concepts in just a few days.

Who should attend?

- Developers
- Operators
- DevOps practitioners
- Technical decision makers

Why attend?

- Implement effective monitoring in your staging, testing, and development environments
- Get up to speed on how DevOps monitoring differs from traditional monitoring
- Better understand the complex DevOps ecosystem and its key features, processes, and roles
- Learn how to get started with app and infrastructure monitoring tools and configurations, such as Kibana and Grafana

Two-day
DevOps Monitoring
workshop with labs
\$2,500/attendee

About us

CloudOps is a cloud consulting and services company focused on open source, cloud platforms and networking. We help businesses thrive in a data driven software economy with successful adoption and operation of cloud platforms, enabling self-service, utility economics and API-automated, continuous delivery of IT.
