

BTA Managed Zerto Disaster Recovery

Disaster Recovery delivered as a service that constantly replicates your virtual servers to a secure Cloud with failover in minutes.

This secure disaster recovery service, delivered by iland and managed by BTA, provides you a total disaster recovery solution. Based on Zerto – the enterprise-class disaster recovery and business continuity software for virtualized infrastructure, the service replicates your Virtual Machines at hypervisor level from your office or datacentre to the iland Secure Cloud.

Accelerate recovery time

If disaster strikes, the secure Disaster Recovery solution can failover in minutes. With its continuous replication technology, Zerto enables recovery points of mere minutes or seconds, ensuring very little is lost in the failover. What's more, the iland Secure Cloud platform ensures that workloads are safe, secure, and compliant with reporting in the Secure Cloud Console.

Network layer flexibility

The integrated virtual network interface offers a firewall, NAT, DHCP, static routing, load balancing, and Site-to-Site VPN. You can also extend your private network technologies such as MPLS and P2P to iland data centres. We will manage your DNS through the console in the event of a failover.

Execute your DR plan at any time

The only way to ensure your DR plan will work in the event of real disaster is with regular testing. With iland's service you get self-service, live and test failover capacity and assisted failback that gives you the confidence to test your continuity plan whenever you like, as often as you need. In addition, a failover wizard, along with alerting and reporting, guides the failover process and keeps you informed of the overall level of protection of your environment.

Key Features

- > Near-zero recovery time objective (RTO)
- > Cloud security and compliance built-in
- > Self-service testing at any time
- > Failover wizard, alerting and reporting
- > Straightforward, cost-effective pricing
- > Network-layer flexibility
- > Integrated DNS management
- > Support for legacy systems
- > Familiar VMware environment
- > Console provides DR visibility
- > State-of-the-art ISO 27001 and SOC2 data centres
- > All supported and managed by BTA

BTA and iland

As the IT industry continues to grow, we cannot always have all the skills or services in house to best suit your business. We invest time researching vendors and suppliers around the world to find partners who we can work with and rely on to deliver valuable services to our clients.

iland is an award winning global cloud service provider of secure and compliant hosting solutions. Headquartered in Houston, Texas and London, UK, iland delivers Cloud services from its data centres throughout the Americas, Europe, and Asia.

iland has achieved the Cloud Security Alliance STAR Gold Certification, which is a rigorous third-party independent security assessment of cloud service providers based on the requirements of the ISO 27001. This certification validates the active security and risk programs in place at iland that help identify, mitigate and monitor information security risk.

Their goal to provide customers with secure, easy-to-adopt cloud services while delivering unmatched visibility & customer support is a perfect fit for BTA clients and makes iland the perfect cloud solution partner for BTA.

BTA Managed

We take the excellent service from iland and provide this to you as a managed service. This means we configure, monitor, manage and support the service, so you do not have to. You get complete peace of mind - a best of breed, secure and compliant service, managed by your IT experts.
