

## The Huddle Platform

# One Solution for Drone Data and Management

## Collaboration

Robust, configurable and secure data management capability. Searchable & shareable, enabling enterprise-wide collaboration

## Analyze

Highly accurate measurement capability down to the centimeter level to perform a deep analysis into your asset.

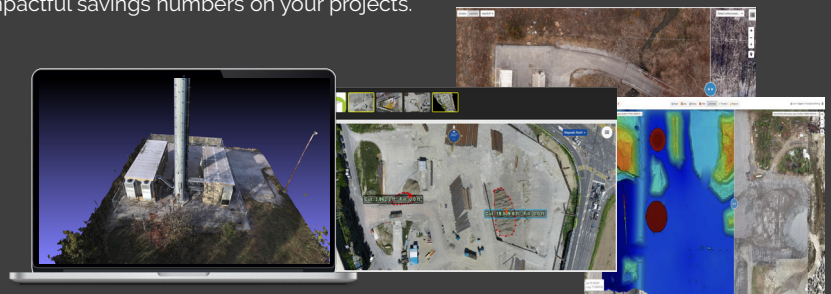

## Visualize

View a wide range of visuals including videos, reality modeling 2D, 3D models and Digital Inspection Twins for detailed inspection and analysis.

## What Can We Do

Aerial Media & Data is changing the way our clients think about drone data, enterprise inspection, and management. We believe companies should have a "one-solution" view to their assets and be able to correlate all associated data for a given asset in one place, including the most current and real-world visual data. Only in this way can visual, engineering, IoT and other types of asset data be combined to reduce operational cost, improve maintenance, proactive compliance, increase safety and deliver impactful savings numbers on your projects.

## Operationize

Customizable and dynamic inspection reporting capabilities, including the ability to trigger field dispatches based on identified conditions.

## The UAV Huddle Platform

- Dedicated platform to store, manage, annotate, and share data
- Full range of user types with various privilege levels
- Upload your own data into the platform using various file types
- Dynamic Reporting, Facade Scale Viewport, AutoCAD overlays
- Create and share data to 3rd Parties such as Clients and Contractors
- Option to Add AI Capability to automatically identify asset issues
