

FOR IMMEDIATE RELEASE

Latest Version of Intellect QMS 4.0 Empowers Organizations to Accelerate Compliance, Adaptability, and Productivity

Faster Implementation Time, Robust Out-of-the-Box QMS Capabilities, and Extreme Configurability to Modify or Build New Apps

Los Angeles, CA, May 18, 2020 — [Intellect](#), a leader in extremely configurable QMS and no-code platform software, today unveiled Intellect QMS 4.0 – the latest version of the company’s flagship product designed to help organizations and quality leaders meet FDA, ISO and other global GxP regulatory compliance requirements, deliver better and safer products, and increase productivity. The new version delivers a new Setup app that cuts implementation times by half, offers advanced analytics and reports to help users better understand quality data, make smarter decisions, and improve business productivity, and enhancements to numerous quality management apps, including Nonconformances, Corrective Actions and Preventative Actions (CAPA), Complaint Management, and Document Control.

“Intellect QMS 4.0 is designed to accelerate compliance today and to future proof your business by offering extreme configurability,” said Romeo Elias, President and CEO of Intellect. “In the era of COVID-19, organizations are faced with unprecedented challenges, and those able to adapt quickly to changing business needs and regulations will be the leaders of tomorrow. Our vision has always been to ‘empower everyone to innovate’ with extremely configurable software that offers adaptability and productivity today and in the future.”

As a result of COVID-19, organizations have uncovered new risks associated with manual processes, paper documents, and siloed data, and the race is on for digital transformation and cloud computing in the quality department. [Intellect QMS 4.0](#) is a robust, integrated, and comprehensive quality management software suite ready to use out-of-the-box and enables onsite and remote workers to be more productive in numerous ways. For remote workers, Intellect QMS 4.0 offers virtual auditing, online approvals, 21 CFR Part 11 electronic signatures, new supplier approvals, and ensures users can access only approved and up-to-date quality documents, data, and processes anytime, on any device.

For organizations with mature Standard Operating Procedures (SOPs) and unique process requirements, Intellect QMS 4.0 puts the user in control and empowers their productivity by providing the freedom to modify any app to meet their unique business requirement, without burdening IT. This ease of use powered by Intellect’s underlying [no-code platform](#) provides peace of mind to customers facing new challenges and changing requirements resulting from the COVID-19 pandemic today or any business or regulatory change in the future. For organizations with limited resources and without the means to make changes directly, Intellect’s team of quality and process experts are available to provide rapid configuration changes. The business value of a robust QMS suite built on a no-code platform is a lower Total Cost of Ownership (TCO) for quality departments while keeping them in control of their processes.

Intellect QMS 4.0 Delivers on Industry 4.0

Industry 4.0 is driving digitization, automation, connectivity, and advanced analytics and reporting in “smart factories”. Intellect QMS 4.0 aligns with Industry 4.0 and Quality 4.0 initiatives underway at many leading organizations.

According to a McKinsey & Company study, emerging Industry 4.0 technologies have helped companies achieve more than a 65% reduction in deviations and 90% faster closure times. With fewer manual errors and data-enabled analysis of root causes, these companies can decrease investigation workloads by 90%.

Build New Business Apps

In addition to modifying Intellect QMS 4.0 apps available out-of-the-box, customers can leverage Intellect’s [no-code platform](#) to build entirely new business apps. These business apps can be for the quality department or other departments that require digital transformation and automation. For example, as supply chains are impacted significantly by COVID-19, many organizations are challenged with new supplier onboarding processes or tracking raw materials and ingredients. Intellect customers can adapt to changing business requirements and regulations by easily modifying and building new business apps to address a wide variety of business needs.
