Ratios and Proportional Relationships

GR	ade 6 Standards	SADLIER PI	ROGRESS MATHEMATICS, GRADE 6
	derstand ratio concepts and use ratio soning to solve problems.		
1.	Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. [6-RP1]	Lesson 1	Understand Ratios and Unit Rates—pp. 10–17
	Examples: "The ratio of wings to beaks in the bird house at the zoo was 2:1 because for every 2 wings there was 1 beak." "For every vote candidate A received, candidate C received nearly three votes."		
2.	Understand the concept of a unit rate a/b associated with a ratio $a:b$ with $b \neq 0$, and use rate language in the context of a ratio relationship [6-RP2]	Lesson 1	Understand Ratios and Unit Rates—pp. 10–17
	Examples: "This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is ¾ cup of flour for each cup of sugar." "We paid \$75 for 15 hamburgers, which is a rate of \$5 per hamburger." (Expectations for unit rates in this grade are limited to non-complex fractions.)		
3.	Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations. [6-RP3]	Lesson 8	Problem Solving: Ratios and Rates—pp. 66– 73
	Make tables of equivalent ratios relating quantities with whole-number measurements, find missing values in the tables, and plot the pairs of values on	Lesson 2	Use Ratio Tables to Find Equivalent Ratios—pp. 18–25
	the coordinate plane. Use tables to compare ratios. [6-RP3a]	Lesson 3	Use Ratio Tables to Compare Ratios —pp. 26–33
	b. Solve unit rate problems including those involving unit pricing and constant speed. [6-RP3b]	Lesson 4	Solve Unit Rate Problems—pp. 34–41
	Example: If it took 7 hours to mow 4 lawns, then at that rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?		
	c. Find a percent of a quantity as a rate per 100 (e.g.,	Lesson 5	Calculate a Percent of a Quantity—pp. 42–49
	30% of a quantity means 30/100 times the quantity); solve problems involving finding the whole, given a part and the percent. [6-RP3c]	Lesson 6	Find the Whole Given a Part and the Percent—pp. 50–57
	d. Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities. [6-RP3d]	Lesson 7	Convert Measurement Units—pp. 58-65

The Number System

GR	ade 6 Standards	SADLIER PR	OGRESS MATHEMATICS, GRADE 6
mu	oly and extend previous understandings of ltiplication and division to divide by stions.		
4.	Interpret and compute quotients of fractions, and solve word problems involving division of fractions, e.g., by	Lesson 9	Divide a Fraction by a Fraction—pp. 80–87
	using visual fraction models and equations to represent the problem. [6-NS1]	Lesson 10	Problem Solving: Fraction Division —pp. 88–95
Cor	Examples: Create a story context for (2/3) ÷ (3/4), and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that (2/3) ÷ (3/4) = 8/9 because 3/4 of 8/9 is 2/3. (In general, (a/b) ÷ (c/d) = ad/bc.) How much chocolate will each person get if 3 people share 1/2 lb of chocolate equally? How many 3/4 -cup servings are in 2/3 of a cup of yogurt? How wide is a rectangular strip of land with length 3/4 mi and area 1/2 square mi?		
	I find common factors and multiples.		
5.	Fluently divide multi-digit numbers using the standard algorithm. [6-NS2]	Lesson 11	Divide Multi-digit Numbers—pp. 96–103
6.	Fluently add, subtract, multiply, and divide multi-digit decimals using the standard algorithm for each operation. [6-NS3]	Lesson 12	Add and Subtract Multi-digit Decimals—pp. 104–111
	each operation. [o-1455]	Lesson 13	Multiply and Divide Multi-digit Decimals— pp. 112–119
7.	Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1-100 with a common factor as a multiple of a sum of two whole numbers with no common factor. [6-NS4] Example: Express 36 + 8 as 4(9 + 2).	Lesson 14	Find the Greatest Common Factor and Least Common Multiple—pp. 120–127

The Number System

GRA	ADE 6	Standards	Sadlier Pr	OGRESS MATHEMATICS, GRADE 6
		and extend previous understandings of rs to the system of rational numbers.		
8.	opp abo cre pos qua	derstand that positive and negative numbers are ed together to describe quantities having posite directions or values (e.g., temperature ove/below zero, elevation above/below sea level, edits/debits, positive/negative electric charge); use sitive and negative numbers to represent antities in real-world contexts explaining the eaning of 0 in each situation. [6-NS5]	Lesson 15	Understand Positive and Negative Numbers and Opposites—pp. 128–135
9.	nu co rep	nderstand a rational number as a point on the imber line. Extend number line diagrams and ordinate axes familiar from previous grades to present points on the line and in the plane with gative number coordinates. [6-NS6]		
	a.	Recognize opposite signs of numbers as indicating locations on opposite sides of 0 on the number line; recognize that the opposite of the opposite of a number is the number itself, e.g., $-(-3) = 3$, and that 0 is its own opposite. [6-NS6a]	Lesson 15	Understand Positive and Negative Numbers and Opposites—pp. 128–135
	b.	Understand signs of numbers in ordered pairs as indicating locations in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections across one or both axes. [6-NS6b]	Lesson 16	Locate Points with Rational Coordinates —pp. 136–143
	C.	Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers and other rational numbers on a coordinate plane. [6- NS6c]	Lesson 16	Locate Points with Rational Coordinates —pp. 136–143
10.		nderstand ordering and absolute value of rational mbers. [6-NS7]		
	a.	Write, interpret, and explain statements of order for rational numbers in real-world contexts. [6-NS7b]	Lesson 17	Compare and Order Rational Numbers—pp. 144–151
		Example: Interpret $-3 > -7$ as a statement that -3 is located to the right of -7 on a number line oriented from left to right.		

The Number System

111	e Number System		
GRA	de 6 S tandards	SADLIER PR	OGRESS MATHEMATICS, GRADE 6
	b. Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a positive or negative quantity in a real-world situation. [6-NS7c]	Lesson 18	Understand Absolute Value—pp. 152-159
	Example: For an account balance of -30 dollars, write $ -30 = 30$ to describe the size of the debt in dollars		
	 Distinguish comparisons of absolute value from statements about order. [6-NS7d] 	Lesson 18	Understand Absolute Value —pp. 152–159
	Example: Recognize that an account balance less than –30 dollars represents a debt greater than 30 dollars.	_	
11.	Solve real-world and mathematical problems by graphing points in all four quadrants of the coordinate plane. Include use of coordinates and absolute value to find distances between points with the same first coordinate or the same second coordinate. [6-NS8]	Lesson 19	Problem Solving: The Coordinate Plane —pp. 160–167
Ex	oressions and Equations		
GRA	de 6 Standards	SADLIER PR	OGRESS MATHEMATICS, GRADE 6
	ly and extend previous understandings of metic to algebraic expressions.		
12.	Write and evaluate numerical expressions involving whole-number exponents. [6-EE1]	Lesson 20	Write and Evaluate Numerical Expressions with Exponents —pp. 174–181
13.	Write, read, and evaluate expressions in which letters stand for numbers. [6-EE2]		
	 Write expressions that record operations with numbers and with letters standing for numbers. [6- EE2a] 		
	Example: Express the calculation, "Subtract y from 5," as $5 - y$.		
	b. Write, Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity. [6-EE2b]	Lesson 21	Write Algebraic Expressions to Record Operations—pp. 182–189
	Example: Describe the expression $2(8 + 7)$ as a product of two factors; view $(8 + 7)$ as		

terms.

both a single entity and a sum of two

Expressions and Equations

Grade 6 Standards	SADLIER PROGRESS MATHEMATICS, GRADE 6
c. Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole-number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations). [6-EE2c] Example: Use the formulas $V = s^3$ and $A = 6s^2$ to find the volume and surface area of a cube with sides of length $s = \frac{1}{2}$.	Lesson 22 Identify Parts of an Expression—pp. 190–197
 Apply the properties of operations to generate equivalent expressions. [6-EE3] Example: Apply the distributive property to the expression 3(2 + x) to produce the equivalent expression 6 + 3x; apply the distributive property to the expression 24x + 18y to produce the equivalent expression 6(4x + 3y); apply properties of operations to y + y + y to produce the equivalent expression 3y. 	Lesson 24 Generate and Identify Equivalent Expressions—pp. 206–213
 15. Identify when two expressions are equivalent (i.e., when the two expressions name the same number regardless of which value is substituted into them). [6-EE4] Example: The expressions y + y + y and 3y are equivalent because they name the same number regardless of which number y represents. 	Lesson 24 Generate and Identify Equivalent Expressions—pp. 206–213
Reason about and solve one-variable equations and inequalities.	
16. Understand solving an equation or inequality as a process of answering a question: which values from a specified set, if any, make the equation or inequality true? Use substitution to determine whether a given number in a specified set makes an equation or inequality true. [6-EE5]	Lesson 25 Identify Solutions to Equations and Inequalities—pp. 214–221
17. Use variables to represent numbers, and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number or, depending on the purpose at hand, any number in a specified set. [6-EE6]	Lesson 26 Write Algebraic Expressions to Represent Problems—pp. 222–229
18. Solve real-world and mathematical problems by writing and solving equations of the form $x + p = q$ and $px = q$ for cases in which p , q , and x are all nonnegative	Lesson 27 Solve Equations of the Form x + p = q—pp. 230–237
rational numbers. [6-EE7]	Lesson 28 Solve Equations of the Form px = q—pp. 238–245

Expressions and Equations

Grade 6 Standards	Sadlier Progress Mathematics, Grade 6
19. Write an inequality of the form x > c or x < c to represent a constraint or condition in a real-world or mathematical problem. Recognize that inequalities of the form x > c or x < c have infinitely many solutions; represent solutions of such inequalities on number line diagrams. [6-EE8]	Lesson 29 Graph Solutions to Inequalities—pp. 246–253
Represent and analyze quantitative relationships between dependent and independent variables.	
 Use variables to represent two quantities in a real-world problem that change in relationship to one another; write an equation to express one quantity, thought of as the dependent variable, in terms of the other quantity, thought of as the independent variable. Analyze the relationship between the dependent and independent variables using graphs and tables, and relate these to the equation. [6-EE9] Example: In a problem involving motion at constant speed, list and graph ordered pairs of distances and times, and write the equation d = 65t to represent the relationship between distance and time. 	Lesson 30 Represent Relationships Between Variables—pp. 254–261
Geometry	
Grade 6 Standards	Sadlier Progress Mathematics, Grade 6
Solve real-world and mathematical problems involving area, surface area, and volume.	
21. Find the area of right triangles, other triangles, special quadrilaterals, and polygons by composing into	Lesson 31 Find Areas of Parallelograms and Triangles—pp. 268–275
rectangles or decomposing into triangles and other shapes; apply these techniques in the context of solving real-world and mathematical problems. [6-G1]	Lesson 32 Find Areas of Polygons—pp. 276–283
22. Find the volume of a right rectangular prism with fractional edge lengths by packing it with unit cubes of the appropriate unit fraction edge lengths, and show that the volume is the same as would be found by multiplying the edge lengths of the prism. Apply the formulas <i>V</i> = <i>Iwh</i> and <i>V</i> = <i>Bh</i> to find volumes of right rectangular prisms with fractional edge lengths in the	Lesson 33 Find Volumes of Rectangular Prisms—pp. 284–291

problems. [6-G2]

context of solving real-world and mathematical

Geometry

GRADE 6 STANDARDS

23.	Draw polygons in the coordinate plane given coordinates for the vertices; use coordinates to find the length of a side joining points with the same first coordinate or the same second coordinate. Apply these techniques in the context of solving real-world and mathematical problems. [6-G3]	Lesson 34	Plot and Analyze Polygons in the Coordinate Plane—pp. 292–299
24.	Represent three-dimensional figures using nets made up of rectangles and triangles, and use the nets to find the surface area of these figures. Apply these techniques in the context of solving real-world and mathematical problems. [6-G4]	Lesson 35	Use Nets to Find Surface Area—pp. 300–307
Sta	itistics and Probability		
GRA	de 6 Standards	SADLIER PRO	ogress Mathematics, Grade 6
Dev	elop understanding of statistical variability.		
25.	Recognize a statistical question as one that anticipates variability in the data related to the question and accounts for it in the answers. [6-SP1]	Lesson 36	Understand Statistical Questions and Describe Data—pp. 314–321
	Example: "How old am I?" is not a statistical question, but "How old are the students in my school?" is a statistical question because one anticipates variability in students' ages.		
26.	Understand that a set of data collected to answer a statistical question has a distribution which can be described by its center, spread, and overall shape.	Lesson 36	Understand Statistical Questions and Describe Data—pp. 314–321
	[6-SP2]	Lesson 37	Find the Median and Interquartile Range— pp. 322–329
27.	Recognize that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation describes how its values	Lesson 37	Find the Median and Interquartile Range— pp. 322–329
	vary with a single number. [6-SP3]	Lesson 38	Find the Mean and Mean Absolute Deviation—pp. 330–337
Sum	nmarize and describe distributions.		
28.	Display numerical data in plots on a number line, including dot plots, histograms, and box plots. [6-SP4]	Lesson 39	Display Numerical Data—pp. 338–345

SADLIER PROGRESS MATHEMATICS, GRADE 6

Statistics and Probability

GRA	DE 6	Standards	SADLIER PR	OGRESS MATHEMATICS, GRADE 6
29.		mmarize numerical data sets in relation to their ntext, such as by: [6-SP5]		
	a.	Reporting the number of observations. [6-SP5a]	Lesson 40	Summarize Numerical Data—pp. 346–353
	b.	Describing the nature of the attribute under investigation, including how it was measured and its units of measurement. [6-SP5b]	Lesson 40	Summarize Numerical Data—pp. 346–353
	C.	Giving quantitative measures of center (median and/or mean) and variability (interquartile range and/or mean absolute deviation) as well as describing any overall pattern and any striking deviations from the overall pattern with reference to the context in which the data were gathered. [6-SP5c]	Lesson 40	Summarize Numerical Data—pp. 346–353
	d.	Relating the choice of measures of center and variability to the shape of the data distribution and the context in which the data were gathered. [6-SP5d]	Lesson 40	Summarize Numerical Data—pp. 346–353
