

Are you compliant?

A HIPAA Security Risk Analysis is an assessment of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of e-PHI across your organization.

Who must conduct an audit?

LTPAC providers who receive Meaningful Use incentive payments from the Centers for Medicare and Medicaid Services (CMS) for implementing electronic health record (EHR) systems are required by the U.S. Department of Health & Human Services (HHS) to conduct an annual HIPAA Security Risk Analysis.

If you have not performed a HIPAA Security Risk Analysis annually, as required, you may have received improper Meaningful Use payments from CMS and may be required to refund those payments.

Even if you do not receive Meaningful Use payments, you are still subject to HIPAA regulations, with fines totaling up to \$10,000 per patient record. Also if you have experienced a security incident, a change in ownership, turnover in key staff or management, have not conducted an analysis in two years, or you are planning to on-board new technology, you should conduct this analysis.

With a HIPAA Security Risk Analysis from vcpi you can...

- *ensure you are compliant with HIPAA's administrative, physical, and technical safeguards,*
- *uncover potential gaps and weaknesses in security policies, processes and systems,*
- *identify and address e-PHI vulnerabilities, to guard against adverse security events.*

We can help...

Vcpi combines our 18 years of experience in LTPAC IT with a proven four-phase approach to assessing the potential risks and vulnerabilities to the confidentiality, integrity, and availability of e-PHI across your organization. Additionally, we've partnered with Compliancy Group to gain the HIPAA Seal of Compliance for vcpi, an accreditation that assures you of vcpi's own compliance with HIPAA and our ability to provide reporting to any organization who requests it.

While the road to HIPAA compliance may run through a HIPAA security risk analysis, the ultimate goal is to enable our clients with the processes, procedures and behaviors necessary to maintain HIPAA compliance for the long term.

Contact vcpi today to discuss your situation and receive a free quote for your HIPAA Security Risk Analysis...

4 phase approach...

Discovery

We start by conducting an inventory of your current systems, processes and procedures

Identification

Our team then analyzes the findings, identifies the gaps and creates the necessary remediation plan

Remediation

Vcpi has the technical expertise to assist your organization with remediation implementation

Documentation

We can provide you with the documentation to prove to management and auditors that your IT controls are in place and working effectively

Contingency Operations

"Vcpi performed an onsite HIPAA security assessment at our senior living community earlier this year. The vcpi team was very professional and well prepared. They communicated with us extensively throughout the entire process. They submitted a thorough report and offered us guidance and support on any follow up issues."

Errin Humphrey - Timber Ridge at Talus
