

our facility + your gear

Since 2000 vcpi has provided 24/7/365 secure data storage, data backup, application hosting, colocation and disaster recovery services to hundreds of clients.

We own and operate our standalone custom built SSAE16, Type 1, SOC1 (Type II) datacenter facility located 30 minutes north of our downtown Milwaukee headquarters. Milwaukee has been ranked by independent IT organizations as among the best places to locate and operate a technology center in the US. Every year we conduct a third party audit in order to prove we meet or exceed the quality standards expected by enterprise hosting clients. If challenges arise the professionals at vcpi are ready to respond 24/7/365 with their IT expertise.

colo @ vcpi

Bring your own server hardware and leverage vcpi's seasoned experts and state of the art IT infrastructure to be your mission critical datacenter without the capital expense of building and staffing your own facility. Let us worry about physical security, infrastructure reliability, and data center operations while you concentrate on what drives your business forward.

Maintain complete control of your hardware remotely or leverage vcpi's various levels of managed colocation to fit your specific needs.

All racks are locked, monitored by video surveillance and accessible to your team 24/7/365. With vcpi you can rest assured your equipment is secure and available.

- Month to month
- Annual
- Multi-year
- Volume discounts
- Our racks, your racks

our facility...

SAS70 Certification Type II. This translates to high performance onsite security. Independent 3rd parties regularly audit vcpi's use of (Type I) and effectiveness of (Type II) controls.

Purpose Built Facility. We designed and built the vcpi Technology Center to last. Our standalone facility is actually a building constructed inside of a building. If a storm takes off one roof, there is another one below it to protect the vital IT equipment inside.

Physical Security. Our technology center is secured 24/7 and covered on the interior and exterior with video surveillance. Keycard entry systems on all entryways ensure only authorized individuals are granted access.

Precision Controlled Environment. The Technology Center's HVAC (Heating Ventilation Air Conditioning) system is N+1 redundant to ensure environmental conditions within the facility and the racks themselves are maintained at optimal temperatures.

Fire Suppression. Advanced fire detection and FE25 fire suppression system.

Conditioned Power. In the event of a total electrical outage, the Technology Center's power systems will continue to run, thanks to our facility wide UPS (Uninterruptible Power Supply). If an extended outage occurs, our on-site enterprise grade diesel generator can indefinitely meet 100% of the facilities power requirements.

Bandwidth. Multiple carriers enter our technology center at physically disparate points to provide ample bandwidth and guard against service failure on any one line. Bring in your own circuits or subscribe to vcpi's fully redundant Internet Gateway with upstream DDoS security included.

Network Operations Center. 24/7 onsite staffing by IT Operations Engineers that have been trained on emergency techniques and management of servers, applications, and network, and provide our clients with technical support in person or remotely.

Customer Workspace. Our Technology Center includes client desking and conference room facilities available to reserve at no additional charge.

At vcpi we are passionate about the power of technology as well as providing a seamless customer experience to our clients. Contact us at 877.908.8274 or visit www.vcpi.com to learn more.
