A safe place for data

Our managed cloud services provide automated resource management for all infrastructure deployments, balancing processes between on-premise and cloud systems so you realize fast, secure, on-demand performance.

Application hosting and management
We host business applications that support your corporate office and long-term care facilities, allowing access to your applications and data from various devices across any network connection. You supply the applications, we take care of the rest and ensure that they will be available to you 99.9% of the time.

Data storage and backup
Storing data in the cloud allows for easier, automated backups to be created and retained for the purpose of full system restoration in the case of system failure.

Disaster recovery
All infrastructure that vcpi solutions depend on is fully redundant, and the failure of a single component will not cause an outage.

Secure data for HIPAA compliance
We offer a complete set of security solutions designed to keep our clients compliant with all applicable regulations, such as HIPAA and HITECH.

Technology center
We have two data centers, both highly virtualized and SSAE 16, SOC 1 (Type II) Certified. In the event of an emergency, all data is secure, with specific plans in place to manage a disaster.

Why vcpi...

- Proactively manage cyclical business with our scalable offering

- Quickly address new business opportunities

- Scale IT capacity up or down on demand with rapid deployment of compute capacity and related services

- We utilize Cisco firewalls with stateful inspection policies filtering all inbound and out-bound traffic, keeping your data safe

- Our data center is 100% owned by us and staffed 24x7x365 with our IT ops professionals

Contact vcpi to explore how we can provide you with secure, reliable, and cost-appropriate cloud solutions.
