

MULTAPPLIED
NETWORKS

INTERNET SERVICE PROVIDERS

MAXIMIZE REVENUES, PROFITS, AND MARGINS WITH MULTAPPLIED'S SD-WAN BUSINESS PLATFORM

Sell and deliver more internet services, more effectively

We allow you to sell multiple links (Cable, DSL, Fiber, LTE) to individual customers, enhancing the end-user experience and making your customers stick by giving them service they can depend on. Control your network, control your brand, and own your customers.

Package your product offerings into our business platform

Use MultApplied's business platform as the vehicle for delivering hosted and cloud-based applications with maximized performance, security, and reliability. Our white label, white box platform allows you to manage and brand the customer experience, end-to-end. Incorporate our platform into your service delivery to increase sales and stickiness of existing services and drive high-margin monthly recurring revenue.

Experience bigger, better, bandwidth

Link aggregation increases your bandwidth by combining multiple links into one, allowing you to reach multiple sites over long distances. Leg tuning gives you optimal bandwidth-all the time by adjusting the speed and performance of your WAN connections when the network is busy. Deliver a reliable end-user experience and reduce trouble tickets created by links with intermittent issues, ensuring application quality remains consistent.

No dropped calls or sessions

Give your customers up-time, all the time. Automatic fail-over redirects traffic from a failed link in less than 300 milliseconds by keeping IP addresses the same, which ensures no dropped call or sessions.
