MULTAPPLIED
NETWORKS

MAXIMIZE REVENUES, PROFITS AND MARGINS WITH MULTAPPLIED'S BUSINESS PLATFORM.

Deliver crystal-clear voice across the globe with always-on connectivity

Multapplied's Software-Defined Wide Area Network (SD-WAN) gives you the tools to manage your network and voice delivery over the internet. Deliver end-to-end Quality of Service (QoS) over the internet and give your customers clear voice and crisp video over affordable internet connections. Allocate Bandwidth using customizable QoS profiles to make VoIP the top priority with the click of a button.

Provide customers with reliable unified communication

Connect teams through online meetings, messaging, and video conferencing with guaranteed up-time, all the time. Multitenancy gives you a single software platform to support multiple end-customers securely, saving customers' money and giving them redundancy.

No dropped calls or sessions, EVER

Multapplied ensures your services are online, all the time. Automatic failover redirects traffic from a failed link in less than 300 milliseconds and keeps IP addresses the same, which ensures no dropped calls or sessions. Multapplied's hub/core redundancy gives customers failover between core servers in their network in the case of a stall or failure, eliminating the core as a single-point-of-failure.

Keep your customers secure

Monitor and control incoming/outgoing network traffic of your LAN to identify overall network capacity and enforce entry/exit rules associated with applications. whether it's Site-to-Site or Site-to-Multisite, protect your customers' data and secure all communications using DTLS in 3 cipher strengths – AES128, AES256, and Salsa20 – or add ciphers as per your customer's needs.

CHANGE THE WAY YOU NETWORK
