

FSTA®

sciences of food and health

"None of my searches in the area of food science are complete without running them through FSTA."

FOOD SCIENCE PROFESSOR, BRIGHAM YOUNG UNIVERSITY

What is FSTA®?

FSTA® is the key database for faculty, researchers and students in the sciences of food and health.

Why does it work so effectively?

- **Interdisciplinary content**

From microbiology to psychology, FSTA® covers all sciences related to food and health, enabling users to carry out in-depth interdisciplinary research

- **Comprehensive, subject-specific indexing**

Every record is deep-indexed using the most comprehensive food thesaurus in the world, so that users can target highly relevant information quickly and easily

- **High quality results**

Every article in FSTA® is assessed for its relevancy by IFIS' in-house scientists, to ensure that it is reliable and directly applicable to food and beverages

FSTA® customers include:

FSTA[®]

sciences of food and health

"FSTA is a key resource that we would recommend to other companies. As the focus is on food science, there is less 'noise' for the scientist to filter out..."

R&D MANAGER, INTERNATIONAL FOOD MANUFACTURER, UK

Key facts and figures*

- **Over 1.2 million** records of high scientific integrity and direct relevance
- Updated weekly with over **1,550 records**
- Records dating from **1969 to the present**
- Includes approx. **5,450 journals**, 1,020 of which are active today
- Contains **22,650 content sources** in total, including conference proceedings, books, trade publications, reviews, reports, patents and standards
- Journals sourced from **53 countries**
- Information sources in **29 languages**
- **10,788 keywords** used to index every record from a subject-specific perspective

This enables users to conduct comprehensive and highly efficient searches, saving valuable time.
